MINISTRY OF EDUCATION AND SCIENCE OF UKRAINE NATIONAL TECHNICAL UNIVERSITY OF UKRAINE "IGOR SIKORSKY KYIV POLYTECHNIC INSTITUTE"

	APPROVED
	by Academic Council of
	Igor Sikorsky Kyiv Polytechnic Institute
	(protocol № dated «» 20 p.)
	Head of the Academic Council
	Mykhailo ILCHENKO
ENVIF	RONMENTAL SAFETY
EDUCATION	AL AND SCIENTIFIC PROGRAM
second (M	aster's) level of higher education
Subject Area	101 Environmental Studies
Study	10 Natural Sciences
tion	Master of Environmental Studies
	Came into force in 2022/2023 study year
	by the Order of Rector

of Igor Sikorsky Kyiv Polytechnic Institute dated ______20___Nº_____

Program Subject Area

Field of Study

Qualification

PREAMBLE

DEVELOPED by the project team:

Project team leader:

Ivanenko Olena Ivanivna, Doctor of Technical Sciences, Associate Professor, Associate Professor of the Department of Ecology and Plant Polymers Technology

Project team members:

Gomelya Mykola Dmytrovych, Doctor of Technical Sciences, Professor, Head of the Department of Ecology and Plant Polymers Technology

Shabliy Tetyana Oleksandrivna, Doctor of Technical Sciences, Professor, Professor of the Department of Ecology and Plant Polymers Technology

Pshinko Halyna Mykolaivna, Doctor of Chemical Sciences, senior researcher, Head of the analytical and radiochemistry department of the A. V. Dumansky Institute of Colloid and Water Chemistry of the National Academy of Sciences

Ivanova Veronika Petrivna, PhD, sales manager at IVIK Formula Water, graduate

AGREED:

Scientific and Methodological Council of Igor Sikorsky Kyiv Polytechnic Institute for program subject area 101 Environmental Studies

Head of the Scient	entific and Methodological Council of the University
	Mykola GOMELYA
(protocol № <u>5</u>	dated « <u>18</u> » <u>11</u> <u>2021</u>)
Methodological	Council of Igor Sikorsky Kyiv Polytechnic Institute
Head of the Met	hodological Council
	Yuriy YAKYMENKO
(protocol №	_dated «» 20)
ONSIDERED:	

According to the results of the review and public discussion of the EP, after receiving all the suggestions and proposals of stakeholders (https://eco-paper.kpi.ua/navchannia/osvitni-prohramy.html), the educational and professional program was discussed at the meeting of the Department of Ecology and Plant Polymers Technology (protocol No_5 dated 17.11.2021). The results of the discussion in the form of an extract from the department meeting were forwarded to SMCU 101 Environmental Studies.

In accordance with the recommendations of the Department of Educational Process Organization, the distribution of educational program components by training credits in the program was changed. In addition, the unification of optional disciplines was carried out and the system of students' choice of these disciplines was updated. The list of educational components was detailed.

освітньої програми							
7 The goal of the educational program							

2 – The goal of the educational program

Training of specialists in the field of ecology, capable of solving complicated, including innovative, specialized complex tasks of the development of new and improving existing systems of environmental conservation and environmental protection from negative anthropogenic impact, carrying out organizational activities, conducting research, the results of which have scientific novelty, theoretical and practical significance; and, through a harmonious combination of fundamental knowledge and engineering tools with training in the humanitarian field, to successfully compete on the labor market in conditions of sustainable innovative scientific and technical development of society.

Corresponds to the development strategy of Igor Sikorsky Kyiv Polytechnic Institute for 2020-2025 (https://data.kpi.ua/sites/default/files/files/2020-2025-strategy.pdf).

	3 – Characteristics of the educational program
Subject area	Description of the subject area: structure and functional components
J	of ecosystems of different levels and origins; anthropogenic impact on
	the environment and optimization of nature management.
	Learning objectives: formation of a complex of knowledge, skills and
	abilities at applicants of higher education for the use in professional
	activities in the field of ecology, environmental protection and
	balanced nature management.
	Theoretical content of the subject area: The concepts, principles of
	natural sciences, modern ecology and their use for environmental
	protection, balanced nature management and sustainable development.
	Methods, techniques and technologies: The applicant must master
	the methods of collecting, processing and interpreting the results of
	environmental studies.
	Tools and equipment: equipment and software necessary for field,
	laboratory and remote studies of the structure and properties of
	environmental systems of various levels and origins.
Orientation of the EP	Educational and Scientific. The emphasis on the development of new
	and improvement of existing systems for conservation and protection of
	the environment from negative anthropogenic impacts
The main focus of the	Special education in the field of natural sciences in Program Subject
EP	Area 101 Environmental Studies.
	Key words: ecology, biosphere, ecological systems, biocenosis,
	geotechnical systems, environment, sustainable development, natural
	resources, anthropogenic load, resource conservation, environmental
	protection, cleaner technologies.
	The program is based on well-known scientific provisions in the field of
	protection and conservation of the environment, taking into account the
	modern level of technology, and focuses on current scientific problems,
	within which further professional and scientific growth of applicants in
	the field of environmental monitoring, management of environmental
	protection activities, rational use of natural resources, management of
	resources in the conditions of technogenesis, the development of
	promising technologies for the reduction of anthropogenic load on the
	environment is possible.
Features of the EP	Interdisciplinary and multidisciplinary training of professionals in
1 catalos of the L1	environmental studies. The program includes blocks of compulsory
	(general and vocational training cycles) educational components with
	the inclusion of a research (scientific) component that ensure the
	formation of general and professional competencies of the program
	subject area, as well as a block of optional educational components
	(vocational training cycles) that strengthen the competencies of the
	program subject area and are important for the further professional and
	scientific career of the applicants.
	The program provides for pre-diploma practice, including at companies
	and specialized scientific institutions; participation of applicants for
	higher education in student scientific circles; the possibility of teaching
	individual special courses in a foreign language, international activities
	in the field of mobility and internships for students and teachers.
	In the field of moonity and internships for students and teachers.

4 – Qualific	cation of graduates for employment and further studying								
Qualification for	Graduates can carry out professional activities according to the type of								
employment	economic activity "Research and experimental development in natural								
employment	sciences and engineering" (NACE code 73.10, ISIC code 731).								
	Graduates can provide services related to scientific research and								
	experimental development in the field of natural sciences, as well as								
	<u>-</u>								
	consulting services related to environmental protection (DK code 016:2010 72.19.19, 72.19.50, 74.90.13). Graduates can work in primary								
	positions in the professions defined by the National Classification of								
	Ukraine: Classifier of professions DK 003: 2010.								
	2211.2 Environmental Specialist								
	2211.2 Environmental Expert								
	2213.2 Engineer of Reproduction of Natural Ecosystems								
	2213.2 Engineer of Reproduction of Natural Ecosystems 2213.2 Engineer of the Protection of Natural Ecosystems								
	2213.2 Nature Management Engineer								
	2149.1 Research Staff (other fields of engineering)								
	2149.1 Junior Researcher (engineering field)								
	2149.2 Environmental Protection Engineer								
	2149.2 Technogenic and Environmental Safety Engineer								
Further training	Study at the Doctor of Philosophy program at the third educational and								
Further training	scientific level of higher education.								
	Acquisition of additional qualifications in the postgraduate education								
	system.								
	5 – Teaching and evaluation								
Teaching and learning	Student-centered learning through lectures, seminars, practical classes;								
I the ming with rearming	personal differentiated and problem-oriented learning through								
	laboratory and pre-diploma practice, self-study through consultations								
	with a teacher, individual classes.								
	All participants of the educational process are provided with timely,								
	accessible and understandable information about the goals, content and								
	program learning outcomes, the order and criteria of evaluation within								
	individual educational components. Full preparation for research								
	activities is provided through participation in scientific and innovative								
	projects with the publication of results in professional journals.								
	Opportunities for approbation of research results are provided, in								
	particular, due to the annual International Scientific and Practical								
	Conferences "Ecology. Human. Society" and "Clean water.								
	Fundamental, applied and industrial aspects".								
Evaluation	Current and semester control is carried out in accordance with the								
E variation	Rating system in the form of reports, presentations, tests and exams.								
	Master's thesis defense.								
	6 – Program competencies								
Integral competence	The ability to solve complex tasks and problems in the field of ecology,								
	environmental protection and balanced nature management and on the								
	border of subject areas, and in the learning process, which involves								
	conducting research and/or implementing innovations and is								
	characterized by the complexity and uncertainty of conditions and								
	requirements.								
	General competences								
-	learn and master modern knowledge								
	make informed decisions								
	generate new ideas (creativity)								
C 04 The ability to	develop and manage projects

spheres of activity	PO 07	
		spheres of activity

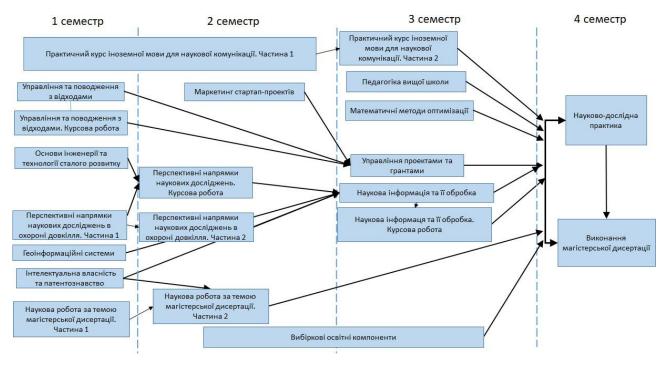

1	,						
PO 08	To be able to communicate professional knowledge, own justifications and conclusions to specialists and the general public clearly and unambiguously						
PO 09	To know the principles of personnel and resource management, the basis of						
1 0 0	approaches to decision-making in conditions of incomplete, insufficient information						
	and conflicting requirements						
PO 10							
PO 10	To demonstrate awareness of the latest principles and methods of environmental						
	protection						
PO 11	To be able to use up-to-date information resources on ecology, nature management						
DO 12	and environmental protection						
PO 12	To be able to assess landscape and biological diversity and analyze the effects of						
DO 12	anthropogenic impact on the environment						
PO 13	To be able to assess the potential impact of man-made objects and economic activities						
	on the environment						
PO 14	To apply new approaches to develop decision-making strategies in complex						
	unpredictable conditions						
PO 15	To assess environmental risks in the conditions of insufficient information and						
	conflicting requirements						
PO 16	To choose the optimal management strategy and/or nature management depending on						
	ecological conditions						
PO 17	To critically comprehend theories, principles, methods and concepts from various						
	subject areas to solve practical problems and problems of ecology						
PO 18	To be able to use modern methods of processing and interpretation of information in						
	environmental research						
PO 19	To be able to independently plan the implementation of an research task and						
1019	formulate conclusions based on its results						
PO 20	To master the basics of carrying out environmental studies and ecological expert						
1020	assessment of the impact on the environment						
PO 21	To know up-to-date approaches to the organization of environmentally cleaner						
	production, reorganization and reconstruction of existing production from the						
	standpoint of resource conservation, taking into account the life cycle of the product						
PO 22	To analyze the results of environmental control of companies, assess the engineering						
1022	and technical level of environmental protection measures against the harmful effects						
DO 22	of production Using gainstiffs and tacknical information, manufactions, mafassional translates to						
PO 23	Using scientific and technical information, regulations, professional knowledge, to						
	apply methods of process control, to manage equipment that protects water bodies,						
	atmosphere, soil and subsoil from pollution and harmful effects						
PO 24	Based on the regulations of environmental standardization and certification, to work						
	with Ukrainian and foreign standards and certification requirements to develop						
	appropriate professional recommendations						
PO 25	To master up-to-date information technology						
	8 – Resource support for program implementation						
Staffing	In accordance with the staffing requirements to support educational						
	activities for the respective HE level, approved by the Resolution of						
	the Cabinet of Ministers of Ukraine dated 30.12.2015 № 1187 in the						
	current edition:						
	Involvement of professional practitioners and lecturers from other						
	higher education institutions in teaching professional-oriented						
	disciplines.						
	Staffing complies with applicable license requirements.						
	builting complies with applicable needs requirements.						

36. 11. 1.1	
Material-technical	In accordance with the technological requirements for material-
support	technical support of educational activities of the respective HE level,
	approved by the Resolution of the Cabinet of Ministers of Ukraine
	dated 30.12.2015 № 1187 in the current edition:
	A specialized laboratory, a complex of laboratories of the department
	and the auditorium, equipped with technical means of demonstration,
	including multimedia systems, are available for research.
	There are scientific and educational complexes "Environmentally
	friendly technologies for humans" and "Surface chemistry and physics"
	of Igor Sikorsky Kyiv Polytechnic Institute and the Department of
	Chemistry of the National Academy of Sciences of Ukraine, on the
	basis of which students gain experience in solving environmental
	problems. There is an option of remote information exchange and
	interaction with teachers.
	Meets license requirements.
Information and	In accordance with the technological requirements for training-
educational-methodical	methodological and informational support of education activities of the
support	respective HE level, approved by the Resolution of the Cabinet of
	Ministers of Ukraine dated 30.12.2015 № 1187 in the current edition:
	The use of the library at the department and the Scientific and Technical
	Library of Igor Sikorsky Kyiv Polytechnic Institute.
	9 – Academic mobility
National credit mobility	Possibility of making agreements on academic mobility in accordance
	with the current legislation of Ukraine in the field of the higher
	education.

VO 06	Educational component 6 F-Catalog	/	exam				
	Total in compulsory components:		90				
	Total in optional components:		30				
	Total in educational components that ensure the acquisition of competencies defined by the SHE		60				
	TOTAL in EDUCATIONAL PROGRAM		120				
	TO THE M ED CONTROL IN GRANN		120				

3. STRUCTURAL AND LOGICAL SCHEME OF THE EDUCATIONAL PROGRAM

4. FORM OF FINAL EXAMINATION OF HIGHER EDUCATION APPLICANTS

Forms of final	Attestation is carried out in the form of public defense of qualifying
examination of higher	work.
education applicants	
Requirements to	The qualifying work involves the independent solution of a complex
qualifying work	problem in the field of ecology, environmental protection and/or
	balanced nature management, which is accompanied by research
	and/or the application of innovative approaches.
	The main results of the qualifying work must be approved, published
	and checked for plagiarism.
	The defense of the qualifying work is completed with the issuance of
	a document of the established form on awarding the graduate a
	Master's degree with the qualification: Master of Environmental
	Studies.
	The qualifying work must be posted on the website of the higher
	education institution or its structural subdivision https://eco-
	paper.kpi.ua/ (abstract), or in the repository of the higher education
	institution (Electronic Archive of Scientific and Educational Materials
	of Igor Sikorsky Kyiv Polytechnic Institute (ELAKPI))).
